

## Trading Terms (MT5, BierbaumPro and Unity)

CFDs are complex instruments and come with a high risk of losing money rapidly due to leverage.  
66.67% of retail investor accounts lose money when trading CFDs with this provider.  
You should consider whether you understand how CFDs work and whether you can afford to take the high risk of losing your money.

XOM/USD	Exxon Mobil Corp.	US Equities	CFD on Spot	1	0.60	0.00	-2.7%	n/a	n/a

**Notes:**

1. Average spread includes periods of normal and low liquidity and reflects values applicable during the previous quarter, as specified above. Actual spread is floating, it depends on market conditions and may vary significantly from the average spread. Current spread is available for review in MT5 platform.
2. Swaps are calculated on a daily basis and depend on the interest rate differential between the countries of traded currencies. Average swap reflects an average value applicable during the previous quarter, specified above. Current swap for each currency pair can be viewed in MT5 platform. For SPOT (Today+2) traded instruments, swap is charged/accrued in triple amount from Wednesday to Thursday. For TOM (Today+1) traded instruments (RUB pairs, USDTRY, USDCAD), swap is charged/accrued in triple amount from Thursday to Friday.
3. Some swap values are indicative of the annual percentage.
4. Pairs marked as "n/a" have not been traded in MT5 by our clients during the reporting period and therefore data is not available.

**Important notice:**

You are prompt to take into account the standard deviation as a volatility indicator. If the standard deviation for a pair is large, then price values are scattered, which means that volatility is high. If the standard deviation is low, prices are less scattered and volatility is low. The standard deviation as a volatility indicator is one of the standard tools of MT5 platform and you can find it in the Trend folder, within the "Navigator" window.

## Contract Specifications BierbaumPro and Unity

Average spreads and swaps for Q3, 2021

Instruments	Description	Platform	Group	Type of Instrument	Average spread <sup>1</sup>	Average Swap <sup>2,3</sup> long	Average Swap <sup>2,3</sup> short	Average negative slippage <sup>4</sup>	Average positive slippage <sup>4</sup>

**Notes:**

1. Average spread includes periods of normal and low liquidity and reflects values applicable during the previous quarter, as specified above. Actual spread is floating, it depends on market conditions and may vary significantly from the average spread. Current spread is available for review in BBPro and Unity platforms.
2. Swaps are calculated on a daily basis and depend on the interest rate differential between the countries of traded currencies. Average swap reflects an average value applicable during the previous quarter, specified above.
3. Some swap values are indicative of the annual percentage.
4. Pairs marked as "n/a" have not been traded by our clients during the reporting period and therefore data is not available.

**Notes:**

- All Coupon Yield calculations are based on price at par (the original value of instrument).
- The funding fee is the cost for receiving credit in the form of leverage. The funding rate is applied only to the leveraged part of the contract and is deducted from the daily coupon yield. The annual funding fee is calculated as: (Notional amount - Margin) x Funding Rate.
- Stop-out level is on a per account basis and is activated at the first market price at the level below the predetermined margin.

**Notes:**

1. All Coupon Yield calculations are based on price at par (the original value of instrument).
2. The funding fee is the cost for receiving credit in the form of leverage. The funding rate is applied only to the leveraged part of the contract and is deducted from the daily coupon yield. The annual funding fee is calculated as: (Notional amount - Margin) x Funding Rate.
3. Stop-out level is on a per account basis and is activated at the first market price at the level below the predetermined margin.
