

KEY INFORMATION DOCUMENT

Purpose

This document provides you (“the client”) with key information about this investment product. It is not marketing material. The information is required by law to help you understand the nature, risks, costs, potential gains and losses of this product and to help you compare it with other products.

Product

Product Name: Contract for Difference (“CFD”) on Brent crude oil futures.

Product Manufacturer: Alfa Capital Markets Ltd (“ACM”), a company authorised and regulated by the Cyprus Securities Exchange Commission (“CySEC”), with license number CIF387/20, registered in Cyprus with incorporation number HE 404988.

Website: <https://alfacapital.com.cy> | **e-mail:** forex@alfacapital.com.cy | **Telephone number:** +357 22 470 900

This document was created on February 17, 2021

ⓘ You are about to purchase a product that is not simple and may be difficult to understand.

What is this product?

Type

A ‘Contract for Difference’ (“CFD”) is a leveraged contract entered into with ACM on a bilateral basis which is settled in cash. A CFD represents an agreement between a ‘buyer’ and a ‘seller’ to exchange the difference between the current price of the underlying asset and its price when the CFD contract is closed. Under a CFD contract, ACM is acting as a counterparty to your transactions; hence, ACM is acting as the buyer each time you are a seller of a CFD and as a seller each time you are a buyer.

CFDs on Brent crude oil futures allow you to speculate on price movements of the underlying instrument. Your return depends on the fluctuation of the price of the underlying as well as the size of your position.

Given that CFDs are leveraged investment products, only a percentage of the notional value of the CFD contract is required to be deposited upfront into your account. Such deposited funds are referred to as the “required margin”. Margin trading requires extra caution since, whilst large profits can be realised in case the price moves in your favour, there is also a risk for realising extensive losses if the price moves opposite. If you fail to deposit additional funds in order to meet the required margin level (i.e. margin call) as a result of a negative price movement, your CFD position will be automatically closed.

Futures are financial contracts which obligate the buyer to purchase an asset or the seller to sell an asset at a predetermined future date and price. CFDs on Brent crude oil futures have a pre-defined expiry date and they cannot be rolled over, at expiry. Therefore, if your position is still open at expiry date, it will be auto-closed and valued based on the last available market price. In case where the terms of a CFD contract are breached, ACM retains the right to unilaterally terminate such CFD contract.

Objectives

The objective of a CFD on Brent crude oil futures is the speculation on price movements of the underlying commodity, without actually owning the physical commodity. A profit is achieved if your speculation on the performance of the underlying commodity was correct, otherwise you will suffer a loss of a portion or all of your account funds.

For example, if you believe that the price of Brent crude oil will increase, you may want to buy a number of CFD contracts on Brent crude oil futures with the intention to sell them at a later stage at a higher price (this is also known as “going long”). The difference between the buy-price and the sell-price equals your profit, minus any relevant costs (detailed below). If you believe that the value of Brent crude oil will decrease, you may want to sell all/ a number of CFD contracts at a specific price, with an intention to buy them back at a later stage at a lower price compared to the price sold (this is also known as “going short”). The difference between the sell-price and the buy-price equals your profit, minus any relevant costs (detailed below).

In general, CFDs on Brent crude oil futures do not have a recommended holding period; and hence, it is at the discretion of the investors to determine the most appropriate holding period based on their own individual trading strategy and objectives.

Intended Retail Investor

CFDs on Brent crude oil futures are intended for investors who have knowledge of, or experience with, leveraged products. Likely, investors will understand the main market factors that determine commodities fluctuations, the key concepts of margin trading and leverage as well as the risk of losing all of their investment. Such investors should have a high-risk tolerance and be willing to accept rapid price fluctuations.

What are the risks and what could I get in return?

Summary Risk Indicator

The risk indicator assumes that the product is speculative and leveraged, and you may lose all your money. There is no recommended or minimum holding period for this product. You may not be able to buy or sell your CFD at the price you wanted to due to volatility of the market or you may have to sell at a price that significantly impacts how much you get back.

The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 7 out of 7, which is the highest risk class. This rates the potential losses from future performance of the product at a very high level. CFDs are leveraged products that due to underlying market movements can generate losses rapidly. There is no capital protection against market risk, credit risk or liquidity risk.

Be aware of currency risk. It is possible to buy or sell CFDs in a currency which is different to the base currency of your account. In such cases, the total return of your investment will depend on the exchange rate between the two currencies. Currency risk is not taken into consideration in the Summary Risk Indicator shown above.

In some circumstances you may be required to make further payments to compensate for losses (i.e. margin call payments). The total loss you may incur will not exceed your invested amount. ACM offers negative balance protection to its clients. In case your account balance becomes negative, for example due to a gap in the market, your account will be brought back to zero (0). This product does not include any protection from future market performance, so you could lose some or all of your investment.

If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from the Investor Compensation Fund (see the section “What happens if we are unable to pay you”). The indicator above does not consider this protection.

Performance Scenarios

Market developments in the future cannot be accurately predicted. The scenarios shown are only an indication of some of the possible outcomes based on recent returns. Actual returns could be lower.

The scenarios shown below illustrate how your investment could perform, under different scenarios, assuming investment holding period of one day (“next day”) and less than one day (“intra-day”), as well as an investment of a notional value of USD 6,100. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the value of this investment varies, and are not an exact indicator. What you get will vary depending on how the market performs and on the holding period of the CFD contracts. The stress scenario shows what you might get back in extreme market circumstances and it does not take into account the situation where ACM is not able to pay you. The following assumptions have been used to create the scenarios in Table 1:

CFDs on Brent crude oil future– LONG Position		
Brent Crude Oil Future opening price	P	\$61 per barrel
Trade size	TS	1 lot
Lots size	LS	100 barrels
Margin %	M	10% (leverage 1:10)
Margin Requirement	MR = P x TS x LS x M	\$610
Notional value of the trade	TN = P x TS x LS	\$6,100
Overnight Swap Rate		n/a
Spread (Bid/Ask)		\$5 per lot

Table 1 (Profit or Loss figures are rounded to the nearest \$)

Performance scenario (Long Position)	Closing price (USD) - incl. Bid/Ask spread	Price Change (%)	Profit or Loss (USD)	Profit or Loss (%)
Stress	\$57.90 (intra-day)	-5%	-\$310 (incl. Bid/Ask spread: \$5)	-50.82%
	\$57.90 (next-day)	-5%	-\$310 (incl. Bid/Ask spread: \$5, Overnight Swap cost: \$0)	-50.82%
Unfavorable	\$60.035 (intra-day)	-1.5%	-\$96.5 (incl. Bid/Ask spread: \$5)	-15.82%
	\$60.035 (next-day)	-1.5%	-\$96.5 (incl. Bid/Ask spread: \$5, Overnight Swap cost: \$0)	-15.82%
Moderate	\$60.95 (intra-day)	No change	-\$5 (incl. Bid/Ask spread: \$5)	-0.82%
	\$60.95 (next-day)	No change	-\$5 (incl. Bid/Ask spread: \$5, Overnight Swap cost: \$0)	-0.82%
Favorable	\$61.865 (intra-day)	1.5%	\$86.5 (incl. Bid/Ask spread: \$5)	14.18%
	\$61.865 (next-day)	1.5%	\$86.5 (incl. Bid/Ask spread: \$5, Overnight Swap cost: \$0)	14.18%

The figures shown above include all costs of the product itself. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What happens if ACM is unable to pay out?

If ACM is unable to meet its financial obligations to you, this could cause losing the value of any position(s) you maintain with ACM. However, ACM segregates your funds from its own funds in accordance with the CySEC's client asset segregation rules. Should such segregation fail, your investment is covered by the Investor Compensation Fund (ICF), which covers the 90% of the cumulative covered claims of the covered investor, or the amount of €20,000, whichever is lower. For further details, refer to CySEC's website at: <https://www.cysec.gov.cy/en-GB/complaints/tae>.

What are the costs?

The table below shows the different types of costs involved when you trade in CFDs on commodities, under the assumptions included in Table 1 above and assuming an investment holding period of one day.

One-off costs	Spread (% of cost on Investment)	\$5 (0.82%)	The spread is the difference between the buy (bid) and sell (ask) of the price that ACM quotes. This cost is realized every time you open / close a trade.
	Slippage	Refer to the Terms of Trading	The slippage is the difference between the price at which a trade was approved and the price at which it was executed. The slippage can be either positive or negative. Positive slippage occurs when the price is executed at a better level than the one requested, whilst negative slippage is the exact opposite.

The aforementioned costs vary, depending on your investment options and prevailing market conditions. Currency conversion costs may apply for converting fees/charges as well as realized profit or loss denominated in a currency other than the base currency of your trading account. Additional information on costs can be found at our website.

How long should I hold it and can I take money out early?

CFDs on Brent crude oil futures have a pre-defined expiry date and they cannot be rolled over into a new contract, if expired. Overall, CFDs are mainly intended for short-term trading and in some cases for intraday trading. You should monitor the product on an ongoing basis so as to determine when is the appropriate time to close your position(s), the closure of which can be done at any time during market hours.

How can I complain?

If you are dissatisfied with any aspect of the service provided to you by ACM, you may submit a complaint via the standard "Client Complaints Form", which can be downloaded from our [website](#), and submitted through the following dedicated complaint submission channels:

- a. **By E-mail:** complaints@alfacapital.com.cy
- b. **By Post:** Themistokli Dervi 3, Julia House Building, 4th Floor, P.C. 1066, Nicosia, Cyprus
- c. **By Fax:** +357 22 681 505

If you are not satisfied with ACM's final decision, you may escalate your complaint to the Financial Ombudsman Service, by submitting your complaint at: complaints@financialombudsman.gov.cy
